LETTER OF TRANSMITTAL.

LAWRENCE, KAS., December 13, 1892.

To His Excellency Lyman U. Humphrey, Governor of Kansas:

In accordance with the requirements of section 5 of the law establishing an Experiment Station at the State University of Kansas, to promote and conduct experiments for the destruction of chinch-bugs by contagion or infection, I make the following report of the results of my experiments for the year 1892, and of the money expended in the experiments.

Yours respectfully,

F. H. SNOW,
Director of the Experiment Station.

On page 4, in the second line, read \$311,428.16 for \$300,925.52.

INTRODUCTORY NOTE.

It has been thought unnecessary to recapitulate in this report the results of observations of previous years on the subject of the contagious diseases of the chinch-bug. The publication of the list of field experimenters who have made reports is deemed advisable, even in face of its great length, under the belief that an opportunity is thus given farmers to be informed of those in their neighborhoods who have made field trials and who are therefore in position to speak at first hand of the probable value of the experiments. In addition to the list of reporting experimenters, a general summary of the season's work in field and laboratory is given, and the needs of the Station are set forth. The report is intended primarily for those especially interested within the State, *i. e.*, the wheat and corn growers, and the laboratory notes and references to the technical work of the Station are brief and generalized.

The Director recognizes the need of many carefully-conducted series of laboratory experiments to clear up points in the work now imperfectly understood. But the evident very considerable work involved in the field experimenting, carried on with but a single center of infection and distribution, has so taken up the available time of the Director and his assistants, that less time than is desirable has been devoted to laboratory investigation. It is hoped that this condition may be remedied during another year, and that the full time of a laboratory assistant may be had.

It is also desirable that several centers of infection and distribution be established, so that this great labor may be divided, and especially so that the time elapsing between a request for infection and the coming into the hands of the farmer of the infected bugs may be as short as possible.

The act establishing the Experiment Station is as follows:

House bill No. 639.

AN ACT to establish an Experimental Station at the State University of Kansas, to promote and conduct experiments for the destruction of chinch-bugs by contagion or infection, and making an appropriation therefor.

Be it enacted by the Legislature of the State of Kansas:

SECTION 1. That the sum of thirty-five hundred dollars be and the same is hereby appropriated for the purpose of establishing, maintaining and conducting an experimental station at the State University, at Lawrence, to propagate the contagion or infection that is supposed to be destructive to chinch-bugs, and furnish the same to the farmers free of charge, under the direction and supervision of the Chancellor, F. H. Snow, as hereinafter provided.

SEC. 2. As soon as practicable after the taking effect of this act, the said Chancellor shall procure the necessary furniture and material, with such assistance as he may require, and proceed to propagate as much contagion, on as large a scale, as may be necessary, and supply the farmers of this State with the same, when required.

SEC. 3. Of the sum hereby appropriated, two thousand five hundred dollars shall be available during the fiscal years ending June 30, 1891, and June 30, 1892, to be applied to defraying the necessary expenses for assistants, furniture, expressage, telegraphing, postage, etc. And said Chancellor is hereby authorized to issue his warrant upon the State Treasurer, upon itemized accounts, for the amounts specified by this act: *Provided*, That not more than five hundred dollars shall be drawn in any one month, except in the month of April, 1891, when the sum of eight hundred dollars may be drawn, if deemed necessary; and all accounts shall be verified. And if the experiments fail to produce the desired results, no more funds shall be drawn from the treasury, and the station shall be abandoned.

SEC. 4. If the experiments shall prove successful, or desirable to be continued, the sum of one thousand dollars shall be made available during the fiscal year ending June 30, 1893, to be drawn under the same conditions as set forth in section 3 of this act.

SEC. 5. The Chancellor shall also report the results of his experiments to the official State paper, provided the said paper shall publish the same free of charge, beginning the first day of April next and every month thereafter, until the first day of December following. He shall also make a full report of the money expended and the results of his experiments to the Governor, on or before the first day of December of each year.

SEC. 6. This act shall take effect and be in force from and after its publication in the official State paper.

Approved March 4, 1891.

OBSERVATIONS AND EXPERIMENTS OF 1892.

I.—GENERAL NOTES AND RESULTS.

The first chinch-bugs for infection were received April 20. These bugs came from Texas. With these bugs the infection cases were started with the "white fungus," *Sporotrichum globuliferum*. This now makes the fourth winter through which this infection has been carried in the laboratory. Near the close of the summer of 1891, a considerable number of dead bugs, whose bodies were filled with this fungus growth, were put away in secure boxes to be used for the beginning of the following season's experiments. With the first bugs sent in a healthy growth was soon obtained in the infection jars, and as soon as the chinch-bugs began to be sent in considerable numbers from various portions of the State the large infection boxes adopted last year were again put into use.

The method of infecting and distributing during this season has been the same as that adopted in 1891. Large, shallow boxes, in which infected bugs were put from the small infection jars used in beginning the work, were kept stocked with live bugs throughout the season. From these boxes a small number of dead bugs covered with the fungus, dying bugs on the outsides of whose bodies the fungus had not yet appeared, and active, apparently healthy but presumably infected bugs, were sent in response to each request for infection.

During the season 3,500 requests for infected bugs were received, of which number more than 3,000 were from Kansas farmers. In every case where the application was accompanied by live bugs (a condition obviously necessary in order that the infection boxes might be kept stocked) infected bugs were returned. Resulting from these 3,000 applications, reports were received regarding 1,732 field experiments. Of these 1,732 experimenters, 196 report a failure to give the infected bugs a trial for various reasons; the results for 120 cases were doubtful in the minds of the experimenters; in 372 cases no successful results were obtained; and in 1,044 cases infected bugs were believed to have been used with successful results. Thus 67.9 per cent. of the experiments regarding the outcome of which reports were received were successful, 24.3 per cent. were unsuccessful, and 7.8 per cent. were doubtful. In making these percentages the "no trial" reports were of course excluded.

Of these 1,044 successful reports, 383 include specific estimates of crops saved by the experiments. The sum in cash value of these estimates is \$39,481.15. If the average amount may be fairly applied to the remainder of the 1,044 Kansas experimenters, an aggregate saving of \$107,615.52 may be esti-

mated. In the two years 1891 and 1892, during which the Station has existed, an aggregate saving of crops amounting in cash value to \$300,925.52 is estimated.

Infected bugs were sent to eight States other than Kansas, and also to Indian and Oklahoma Territories. Reports were received from 216 experimenters in these States and Territories, of which 153 report successful results, 16 unsuccessful, 7 doubtful, and 40 were unable to give the infected bugs a trial.

The per cent. of successful reports from our field experiments is not so great this year as last, nor is the estimated average saving by each successful experiment. Undoubtedly one reason for this is, that the bugs were not prevalent in such large numbers this year. The *Sporotrichum* infection is propagated by minute spores, which are carried from one bug to another by the wind or by contact of one bug with another. It is evident, therefore, that the more isolated the bugs are from one another, the less the opportunity for the spores to find their victims. It seems, moreover, that the meteorological conditions have not on the whole been so favorable for the growth of the fungus as last year. This was evidently the case here at Lawrence. There is no question that the successful propagation of the fungus is in a large measure dependent on atmospheric conditions. While, with our best efforts to maintain the proper conditions at the Experimental Station, the fungus became only desultory in its growth, in the fields in Reno county, for instance, the fungus was spreading rapidly. Observations of this character have brought us to the opinion that the efficiency of the enterprise would be greatly promoted if several centers for propagating and distributing the fungus were maintained during the time of the chinch-bug ravages, say from May till September. This, we believe, would insure greater certainty in having a supply of the fungus always on hand the day the orders are received, and two or three days would often be saved in time of transit. When the chinch-bugs are present in large numbers in a field, the saving of a few days' time in the application of the infection might result, in the aggregate, in the rescue of large values. It is probable that the maintenance of four such stations for the time suggested could be accomplished by the expenditure of \$1,200 per annum.

II.—LABORATORY NOTES.

The white fungus infection, *Sporotrichum globuliferum*, as in previous years, survived the winter in our laboratory in the bodies of dead bugs which had been laid by from time to time during the previous summer. The first chinch-bugs for infection came to our laboratory April 20, from Texas, and with these we started our infection cases. Only a small number of bugs was sent us at this early date and the disease worked slowly, as we had found to be the case under like circumstances in previous years. However,

when bugs for infection later in the spring came in in large numbers, from Kansas, the disease spread rapidly enough to fill the orders. Our experience in the laboratory as well as in the field confirmed our beliefs of previous years, that the bugs must be massed in considerable numbers before the fungus can spread rapidly.

Our infection boxes were kept in a basement laboratory, and as the heat of summer increased the sides and floor were kept sprinkled, and the temperature was thus maintained below 85° F., and the atmosphere was comparatively humid. Nevertheless towards the middle of July, although bugs were received in sufficient quantity to keep our boxes well stocked, the spread of the disease began to decrease, and we had to call for contributions from infested fields to fill our orders. It is more than probable that if boxes were kept in a shaded place out of doors, for instance, in a shallow excavation in a shaded bank, where the temperature might fall at night nearly to that in the open, better results would be realized during the summer months.

In three instances dead bugs with no external fungus growth were sent in from infected fields with the statement that the bugs had died rapidly as if from disease. The bugs ranged in age from those just hatched to adults. On close inspection, light-colored patches could be made out beneath the skin of the abdomen of the red larval bugs. The crushed bodies of the bugs were seen to contain mycelial growths similiar to those known to have died of *Sporotrichum*. Placed in a moist chamber, the characteristic second growth of *Sporotrichum* was produced on many of the bugs. It thus seems that the ravages of *Sporotrichum* are not always marked by an external growth of fungus. However, whether the fungus can be communicated through a field, or to any extent without the formation of spores outside the body, is a subject for consideration. It is known that in culture media and within the bug the fungus breaks up into hyphal bodies, illustrated by figures 4, 5, and 6, plate II, of our First Annual Report. Whether these bodies can in any way gain exit from the bug and act as the ordinary aerial spores in distributing the disease, we have no direct evidence to show. None of the bugs sent us from the fields above mentioned showed an external growth of *Sporotrichum*; yet this disease was undoubtedly present throughout these fields.

Empusa aphidis was present in our infection boxes and in some fields during the summer of 1891; but although we reserved an abundance of material to start this infection this spring, it did not start into new growth, and no case of parasitism by this fungus came under our observation this season. We have attempted during the past season to accumulate further evidence of a bacterial disease of the chinch-bug. The results of our experiments have been contradictory, and the question is not yet sufficiently settled to make a detailed report of value. Professor Forbes has discovered that bacteria normally exist in the digestive tract of *Hemiptera* and that *Micrococcus insectorum* occurs in chinch-bugs showing no signs of disease. Our observations made on chinch-bugs of different ages sent in from various parts of the State

agree with Professor Forbes's statement. There are certain phenomena, however, in our laboratory and field experiments that warrant us in pursuing the inquiry still further.

III.—REPORT OF FIELD AGENT.

To the Director of the Experiment Station:

Having served you another year in the capacity of your special agent, I present my report.

During the present season I have visited 15 counties, three less than the number visited by me during the season of '91. They are: Osage, Lyon, Shawnee, Chase, Marion, McPherson, Harvey, Reno, Sumner, Elk, Coffey, Labette, Franklin, Allen, and Wabaunsee. In these counties I found that the ravages of the chinch-bugs were inconsiderable, with the exception of Lyon county, in the central and northern parts of which corn fields had been in a few instances almost completely destroyed, and in many cases partially damaged. Elk county, where last year bugs had been the cause of much injury to growing crops, I found relatively free from the pests. It is interesting to note that, where successful experiments were conducted last year, the farms are almost universally free from the presence of the injurious insects this season.

Of the crops damaged this year, the wheat fields have suffered least.

Sporotrichum, the white fungus, made its appearance early in the spring. As late as the first week in August, I had an opportunity to observe the results of white fungus in the corn field of Mel. H. Calbeck, near Peabody, Marion county. In Mr. Calbeck's field, the results were entirely satisfactory. The appearance of this disease in the field was subject to the same general conditions heretofore observed. The field lay alongside a field of wheat stubble, from which the bugs had gone in upon the corn from 20 to 30 rows deep. The lower blades of the stalks in these rows were seared and dead, and while the bugs were not present in sufficient numbers to inflict any great injury, their destructive operations were suddenly and entirely checked.

Before dying, the bugs had secreted themselves in crevices in the earth, beneath bunches of grass, and under clods. The dead ones were enshrouded in the characteristic white fungus. The behavior of this disease wherever I have observed it has been in no wise different from that of last year. Also, as far as I have been able to learn, wherever it has manifested itself, it gave the utmost satisfaction to the experimenter.

The gray fungus, *Empusa aphidis*, I have been unable to find in any fields, although throughout the entire season's observations I have kept a most vigilant watch for its presence.

As to bunching bugs: I have observed that the bugs moulted at irregular intervals during the season. The first bunches to which my attention was

called were in the corn field of T. N. McFadden, of Waverly, Coffey county. Two days after the infection was put into the field the bugs began to collect in small heaps about the foot of the stalks, under clods or in depressions, but only in that part of the field in which the infection had been distributed. The day was extremely warm, and the soil was dry. I visited the field twice during the day, once at 9 A. M. and again at 1:30 P. M. At both times the actions of the apparently sick bugs were in no wise different. The bunches contained three sizes—the very small red bugs (larvæ), the larger brown, wingless ones (pupæ), and the black winged ones (adults). The second class predominated. These bugs had neither “burst” nor moulted, to any noticeable extent; only an occasional moult did I see near the edges of the heaps, which did not generally exceed four or five teaspoonfuls to a place. As to farther results I have received no word.

The tenth day after the infection has been scattered is almost invariably given by the farmers for the bugs to wholly disappear after bunching. This interval is given without regard to the time of season.

During the last week of July and the first week of August I saw thousands of freshly moulted bugs in all fields, but these had pretty generally left their skins in the axils of the corn blades. At this time I did not find a single bunch of moulting bugs in either infected or uninfected field. But two reports of bunching bugs in uninfected fields have reached me, and a close investigation failed to disclose any traces of these bunches, and the remaining live bugs were not found in large numbers. These heaps were said to have been in the low places—the furrows of the cultivator.

Wherever I have observed bunching, the skins have mostly been those of the wingless, large brown bugs (pupæ), while the little red ones (larvæ) were found dead in no small numbers, intact, among the open skins. Wherever such bunching has occurred, a disappearance, if not by death then by migration, has uniformly resulted. The phenomenon of bunching has only been seen and reported during the warm, dry weather.

In numerous instances, the fact that chinch-bugs, regardless of the time of the season, have scattered shortly after the infection has been placed in the fields, has brought forth the question, “Did your infection cause them to scatter?” The general consensus of opinion among the farmer-experimenters who have perceived such results is an affirmative one. I have again and again observed the above results, and in each case I have failed to find even traces of *Sporotrichum* or *Empusa*. Small and large have apparently taken to traveling from the same motive. I have only observed this in infected fields, until the time when so many bugs were flying (during the last week of July and the first week of August), when there seemed to be a general dispersal in all fields.

Near Marion, Marion county, M. C. Price, after securing infection from our laboratory, used it, he says, with splendid results. Within two weeks his bugs had “bunched, burst, and died.” Thereupon several of his neighbors

came to him for supplies of infection, and he declares, "almost to a man, the reports were similarly successful." The time for results to be seen was the same in the majority of cases. A few white-fungus-covered bugs were found in Mr. Price's field. I can vouch that where there had certainly been many bugs, there were none worthy of mention at the time of my visit. It has not fallen to my lot to see the bugs "bunching, burst, and die," if burst and die they do, as reported so often by men of intelligence.

In conclusion I have to say, that the season, so far as my observations extend, has been, all things considered, a very good one in percentage of successful reports. The percentage of favorable reports will average, I think, about the same as last year's, notwithstanding the fact that, while chinch-bugs were more generally distributed throughout the State this year, they have not been nearly so numerous in the fields in which they made their appearance. The observation that the infection works more rapidly and a more complete extermination where the bugs are thickest holds good for this season as it did last. A large number of the unfavorable reports I consider to be due to the want of sufficient numbers of bugs in close proximity to each other for successful work. Nowhere have I found a chinch-bug disease prevailing as an epidemic this year, from the fact just stated. Upon the whole, the conditions of our present season have, I think, been less favorable than those of last.

My work as your agent has been attended with no unpleasant circumstances, as far as the people of our fair State are concerned. Everywhere I have met with the kindest treatment. I find the interest in field-pest extermination fast increasing among the farmers who openly welcome the aid of science in both the cultivation and care of their crops and also in the extermination of pests destructive to the products of their toil. With the aim and work of the Experiment Station, I have everywhere found the people in sympathy and watching with interest the final outcome of artificially-propagated infections for pest extermination. In such education they express themselves as seeing an economic value worth to the State of Kansas a thousand times the cost expended upon it.

Yours obediently,
ERNEST C. HICKEY.

IV.—REPORT OF A FIELD TRIP BY ASSISTANT STEVENS.

F. H. Snow, Director of Experimental Station:

Acting under your advice, I started, July 13, for Reno county, Kansas, where several packages of infection material had been sent. A letter had been received at your office from Mr. Hyde, living near Pretty Prairie P. O., stating he had applied infection in his corn field, and asking for further advice. I reached Mr. Hyde's farm on the morning of the 14th, and we went at once to his corn field. There I found the bugs had worked in about 10

rows on the side next to the wheat field. He said the bugs were not nearly so numerous as when he began putting in the infection, but he did not know what had become of them. We began turning over the clods, and there in large quantities were bugs of all ages swarming, and masses of empty skins, and a large number of dead bugs covered with the white growth of *Sporotrichum*. Mr. Hyde had attached no importance to these white bugs, in fact, he did not recognize them as bugs. My magnifier, however, made this fact clear to him. We found these white bugs throughout the part of the field attacked by bugs. Mr. Hyde had worked diligently with the infection. His infection box was a thin cigar box! In our own experience boxes with thick sides retain moisture longer and give better results.

We visited Mr. Mendenhill's field, which adjoins Mr. Hyde's. Here the bugs had not been so numerous as at Mr. Hyde's, and no infection had been used. I could find no skins in this field, while at Mr. Hyde's they were in patches at the base of every hill. By diligent scratching about, I found the *Sporotrichum* bugs. At Mr. Hyde's white bugs were plentiful. Mr. Hyde stated that the wind had been blowing from the east a few days previously, and the infection might have been brought in this way. Mr. J. S. Morton had obtained infection from our laboratory, and I visited his field. He said there was hardly one bug now where there were 10,000 before he put in the infection, and indeed there were few bugs in his field at the time of my visit. I could find white bugs here and there, and some empty skins scattered about in the soil. Mr. Morton said the corn had been literally covered with bugs. These were the only fields in this vicinity that had been attacked by bugs, and corn was everywhere in prime condition.

At Hutchinson I saw Wm. E. Hutchinson, president of the Valley State Bank, and he gave me a striking account of his last year's experience. He said the bugs were making a rapid and clean sweep of his corn, and when he read in your directions that it might take a week or more before the infection began to work, he had no hope of saving his crop. But after he put the infection in the field, the bugs ceased their ravages and died in masses, turning white. He had just started an infection box for this year at the time of my visit, but with no immediate evidence of success.

Mr. Briggs, living near Nickerson, had obtained infection from Moore & Chrisman at Hutchinson, to whom you had sent packages for distribution. Mr. Briggs told me nearly an acre of corn had been devoured by the bugs when he got the infection. I found only a few bugs in a limited locality in his field. If the infection was instrumental in thinning out his bugs, as observations in other fields seemed to evidence, the recent rains had obliterated all traces of it. Mr. Hoath and Mr. Wiley, not far from Mr. Briggs, had like experiences—the bugs remaining in their fields, when I saw them, were very few, and doing no noticeable damage. Mr. Morris, whose field adjoins Mr. Briggs's, had just started his infection, and the disease was showing its effects in his box. It is worthy of note, here, that while the bugs had practi-

cally disappeared in the fields of Mr. Briggs, Mr. Hoath, and Mr. Wiley, where the disease had already had time to do its work, in the field of Mr. Morris the bugs were still in force. I found on the farm of Mr. Strickler, where the infection had been in his corn field for five days, that the bugs were dying rapidly. I could find large numbers of *Sporotrichum*-covered bugs under the clods and fallen corn stalks. That part of Mr. Strickler's field where the disease was at work was only separated from the farm of Mr. Morris by a road and small uncultivated field.

To sum up: In no field did I find all the bugs exterminated by the disease. In all of the fields where the infection had been working for two weeks, the bugs had so greatly decreased in number as to be hardly worthy of note. In one field where the infection had been only a few hours the bugs were still in force. In another field where the the infection had been scattered five days previously the bugs were rapidly dying, and the dead bugs were covered with a vigorous growth of *Sporotrichum*.

Respectfully submitted,

W. C. STEVENS.

V.—LIST OF FIELD EXPERIMENTERS MAKING REPORTS.

Allen County.—Successful, 14; unsuccessful, 9; doubtful, 4; no trial, 3.

- Ard, M., Elsmore. July 13; successful. Saved corn 27 bushels.
 Barth, C., Iola. May 30; successful. Saved corn lying next to wheat; gave infected bugs to a neighbor who saved corn.
 Blackmar, T., Humboldt. July 21; successful.
 Buchanan, W., Iola. July 11; unsuccessful.
 Busby, H., La Harpe. June 15; unsuccessful.
 Butler, J., Iola. May 31; successful.
 Cozine, R. H., Carlyle. July 13; successful.
 Delaplain, J. W., Iola. July 23; no trial.
 Dornbergh, J. C., Humboldt. July 7; unsuccessful.
 Fisher, P. W., Iola. June 16; unsuccessful.
 Fulks, V. P., Iola. June 9; successful. Saved some corn.
 Harris, G. H., Wise. July 19; doubtful.
 Hottenstein, J. O., Humboldt. July 28; doubtful.
 Mabie, E. R., Geneva. July 21; unsuccessful.
 May, W. B., Bayard. July 12; successful. Saved corn 50 bushels; saved millet.
 Newell, J. H., Iola. July 21; successful. Saved corn 300 bushels; saved timothy.
 Roedel, A., Elsmore. July 11; successful.
 Roehl, G., Humboldt. July 21; successful.
 Saunders, W., Humboldt. Successful.
 Sellegren, J. B., Elsmore. July 23; doubtful.
 Smith, H., Humboldt. July 8; doubtful.
 Spofford, D. A., Moran. June 21; unsuccessful.
 Swanson, J. P., Savonburg. No trial.
 Tredway, J. T., La Harpe. June 3; unsuccessful.
 Trimble, S., Bayard. July 21; successful. Saved corn 1,000 bushels.
 Troutwine, M., Iola. July 27; no trial.

Waters, Henry, Iola. July 9; successful.
Willenburg, F. M., Humboldt. July 18; unsuccessful.
Wolf, J. W., Iola. July 2; successful. Saved corn.
Works, C. W., Humboldt. June 20; unsuccessful.

Anderson County.—Successful, 18; unsuccessful, 1; no trial, 3.

Alexander, H. P., Sugar Valley. July 11; successful. Saved corn and wheat.
Buford, Geo., Colony. Obtained infection of W. J. Lane; successful.
Burns, Chas., Garnett. Obtained infection of W. J. Lane; unsuccessful.
Culen, J. I., Colony. August 1; no trial.
Fergus, S. M., Glenlock. July 14; successful.
Fuller, L. A., Garnett. Obtained infection of W. J. Lane; successful.
Henning, J. A., Garnett. July 13; successful; saved corn 10 acres.
Lándis, H. D., Westphalia. Obtained infection of W. J. Lane; successful.
Lane, W. J., Garnett. June 9; successful.
Lee, A. R., Greeley. May 30; successful.
Macklin, T., Greeley. June 4; successful.
Martin, C. F., Greeley. July 26; no trial.
Moler, A., Mineral Point. July 13; successful.
McCall, J. M., Greeley. July 25; no trial.
Patton, Geo., Garnett. Obtained infection of W. J. Lane; successful.
Quiett, W. H., Lone Elm. July 26; successful.
Reynolds, Chas., Kincaid. July 18; successful. Saved corn.
Ribstock, C. T., Garnett. Obtained infection of W. J. Lane; successful.
Wallace, J. D., Welda. June 14; successful.
Walrad, L. D., Mount Ida. July 12; successful. Saved corn 50 bushels.
Watson, J. H., Garnett. July 12; successful. Saved corn.
Wilkins, R. J., Welda. June 16; successful.

Atchison County.—Successful, 2; unsuccessful, 1.

Reese, D. M., Atchison. July 22; successful. Saved corn and oats.
Sutter & Bros., Effingham. July 18; unsuccessful.
Warner, S. D., Lancaster. July 29; successful.

Barber County.—Successful, 8; unsuccessful, 2; doubtful, 1.

Chapin, F. B., Medicine Lodge. July 12; successful. Saved six acres of corn.
Cox, J. H., Aetna. July 9; successful. Saved corn.
Elmore, Nellie, Hazelton. July 18; successful.
Hahn, J. O., Medicine Lodge. July 1; doubtful.
Hinman, C. I., Medicine Lodge. July 8, successful. Saved sorghum cane 20 tons.
Keith, E., Sharon. August 30; successful. Saved wheat.
Lainy, Geo., Wingona. June 30; unsuccessful.
Osborne, W. H., Medicine Lodge. July 11; successful.
Turner, J. T., Medicine Lodge. August 29; successful. Saved corn 200 bushels, and fall wheat.
Walton, Thos., Deerhead. July 12; unsuccessful.
Wright, J. C., Medicine Lodge. August 29; successful. Saved corn.

Barton County.—Successful, 2; unsuccessful, 1; doubtful, 1; no trial, 1.

Buck, O. H., Ellinwood. July 30; doubtful.
Cope, D., Millard. July 13; successful. Saved corn 100 bushels.
Livingstone, L. H., Galatia. July 16; unsuccessful.

Neier, C., Great Bend. June 6; successful. Saved some barley.

Wonsetter, J., Verbeck. July 26; no trial.

Bourbon County.—Successful, 7; unsuccessful, 5; doubtful, 1.

Conner, Jas., Fort Scott. July 27; successful. Saved sorghum cane 8 acres.

Dunlap, W. G., Godfrey. July 20; successful. Saved corn 350 bushels.

Hollenbeck, P., Guelph. July 25; no trial.
Johnson, J. M., Ewell. August 25; successful.
Ketcher, G. W., Millerton. July 4; successful.
Laurie, M., Millerton. July 11; successful.
Leach, A. C., Conway Springs. July 1; successful.
Leatherman, J. R., Conway Springs. August 6; no trial.
Lockhart, W. J., Ewell. July 8; unsuccessful.
Menser Bros., Anson. July 12; unsuccessful.
McAllister, C. B., Belle Plaine. July 19; successful. Saved corn 20 acres.
McCuddy, I. N., Mayfield. August 24; no trial.
Naylor, J. E., Argonia. July 4; successful. Saved some corn.
Reinhart, F., Milan. July 15; unsuccessful.
Roberts, W. H., Zyba. July 5; successful. Saved some corn and millet.
Rogers, F. M., Ewell. July 18; unsuccessful.
Russell, A. D., Mulvane. July 1; unsuccessful.
Sanders, F. L., Mayfield. July 2; successful. Saved some corn.
Shinn, M. J., Millerton. July 11; no trial.
Snider, B., Anson. July 4; successful.

Snider, L., Drury. July 13; successful. Saved corn 1,120 bushels.
 Snyder, J., Perth. July 5; doubtful.
 Vincent, S. R., Argonia. August 20; no trial.
 Whealy, W. G., Wellington. July 9; doubtful.
 White, H. N., Portland. July 13; successful. Saved corn 100 bushels, wheat 100 bushels, oats 50 bushels.
 Williams, H. M., Portland. July 12; no trial.

Wabaunsee County.—Successful, 32; unsuccessful, 9; doubtful, 7; no trial, 4.

Andres, C., Alta Vista. July 2; doubtful.
 Barnes, W., Paxico. July 5; doubtful.
 Bell, J. A., Alta Vista. June 28; successful.
 Beutel, A., Alma. July 9; successful.
 Berroth, G., Alma. July 21; no trial.
 Best, J., Maple Hill. July 8; doubtful.
 Bolles, J. S., Alta Vista. June 24; unsuccessful.
 Bollier, F. H., McFarland. July 9; successful. Saved some corn.
 Campbell, J. P., Maple Hill. July 12; successful.
 Clothier, H. H., Vera. August 9; no trial.
 Comstock, G. J., McFarland. July 21; no trial.
 Cornell, G. G., Alma. July 7; successful.
 Cottrell, A. A., Wabaunsee. July 13; successful. Saved corn 18 acres.
 Craig, N., Wilmington. July 7; successful. Saved corn 7½ acres.
 Crane, W. R., Maple Hill. July 5; unsuccessful.
 Crouch, W. S., Maple Hill. August 1; doubtful.
 Dann, L. C., Harveyville. June 24; successful. Saved corn 500 bushels.
 Darrah, T., Keene. August 10; doubtful.
 Dean, F. A., Alta Vista. July 9; unsuccessful.
 Dierking, F., Chalk Mound. July 11; successful. Saved corn 500 bushels.
 Enlow Bros., Pavilion. July 21; successful.
 Ewing, B. L., Alma. July 1; successful. Saved corn 75 bushels.
 Hamar, C. A., Harveyville. June 28; unsuccessful.
 Haslett, R. A., Eskridge. July 5; successful.
 Haywood, J. H., Harveyville. June 27; successful. Saved corn 100 bushels.
 Hawthorne, J., Chalk Mound. July 20; successful.
 Johnson, J. M., Harveyville. July 7; unsuccessful.
 Krietzman, C., Templin. July 25; unsuccessful.
 Kilian, E. A., Alma. July 14; doubtful.
 Kriegenherdt, H., Alma. July 21; successful.
 Morrett, J. A., Alta Vista. July 9; successful. Saved corn 200 bushels.
 Morrison, W. H., Alma. July 25; successful.
 McCoy, J., Eskridge. July 15; unsuccessful.
 McCullough, J. T., Alta Vista. June 28; successful.
 McCutcheon, P., Chalk Mound. July 13; successful.
 Neiswender, W., Chalk Mound. July 13; successful.
 Parks, J. C., Eskridge. July 2; unsuccessful.
 Patterson, R., Eskridge. July 12; successful. Saved corn 1,125 bushels.
 Peterson, C., Chalk Mound. July 15; successful.
 Reber, F. H., Volland. July 18; successful.
 Rinehart, W. M., Eskridge. July 16; successful. Saved corn 200 bushels.
 Schuck, F. E., Harveyville. July 8; doubtful.
 Skeen, J. A., Eskridge. July 13; successful. Saved corn 600 bushels.

Southwick, L. V., Keene. July 13; successful.
Sparling, A. C., Eskridge. July 9; successful.
Spears, W. T., Volland. July 18; unsuccessful.
Stiles, A. H., Pavilion. July 9; successful. Saved corn 1,050 bushels.
Strassle, A., Paxico. July 14; successful.
Stratton, R. C., Pavilion. July 25; no trial.
Willey, G. W., Alma. July 22; successful.
Young, J. C., Harveyville. July 27; successful.
Ziegler, F., Chalk Mound. July 11; successful. Saved corn 100 bushels.

Washington County.—Successful, 14; unsuccessful, 11; no trial, 6.

Alexa, J., Hanover. July 18; unsuccessful.
Auld, L. R., Albia. August 1; no trial.
Beckermeyer, H., Linn. June 29; successful.
Bennett, K. S., Linn. June 29; unsuccessful.
Bower, A. S., Albia. July 15; successful. Saved corn 30 bushels.
Cammel, J. C., Ballard's Falls. July 22; successful. Saved corn 250 bushels.
Dikeman, F. R., Barnes. July 27; no trial.
Edington, S., Washington. July 14; successful.
Felt, E. K., Barnes. July 22; successful. Saved corn 40 acres.
Hatch, H. M., Mahaska. July 27; unsuccessful.
Hay, T. J., Palmer. July 16; successful. Saved some corn.
Hills, W. P., Weltbote. July 23; unsuccessful.
Hyland, H., Brantford. June 16; unsuccessful.
Jacobs, W., Washington. July 15; successful. Saved corn 500 bushels, wheat 300 bushels, oats 500 bushels.
Kutsch, J., Washington. July 27; unsuccessful.
Liston, W. W., Washington. July 28; successful. Saved corn 30 acres, and 100 acres of fall wheat.
Lohmeyer, A., Linn. July 13; unsuccessful.
Lowe, D. E., Day. August 29; successful. Saved broom-corn 30 acres.
Miller, W., Brantford. July 14; successful. Saved some corn.
Murdock, J. A., Clifton. July 8; no trial.
Oberhelman, E., Parallel. July 12; successful.
Osterhout, M. D., Gaskill. August 5; unsuccessful.
Pugh, E. N., Haddam. July 15; successful. Saved some corn.
Rowell, L., Emmons. July 27; no trial.
Schwerdfeger, C. F., Linn. July 21; unsuccessful.
Series, I. P., Palmer. July 18; successful. Saved corn 20 acres.
Stephens, C. B., Tansel. July 19; successful. Saved some corn.
Stewart, J. L., Linn. July 13; unsuccessful.
Van Petten, J. T., Linn. July 12; unsuccessful.
Wallace, J. M., Linn. July 28; no trial.
Williams, G. T., Mahaska. July 26; no trial.

Wilson County.—Successful, 9; unsuccessful, 8; doubtful, 2; no trial, 1.

Canty, S., Buffalo. July 18; successful.
Graham, R., Altoona. July 25; doubtful.
Grass, A., Fredonia. July 16; successful. Saved corn 30 acres.
Hall, I. C., La Fontaine. July 14; doubtful.
Hamilton, L. A., Fredonia. May 30; unsuccessful.
Hite, W. H., Altoona. July 14; successful.

Hudson, W. L., La Fontaine. June 24; unsuccessful.
Johnston, H. N., Altoona. July 16; unsuccessful.
Kepler, U. A., Vilas. May 31; unsuccessful.
Lamb, J. N., Coyville. June 17; unsuccessful.
Loofbourrow, Sarah, Fredonia. July 2; successful. Saved corn "several hundred bushels."
Mariner, C. H., Fredonia. June 24; unsuccessful.
Miller, G. L., Benedict. July 12; successful.
Neal, F. O., Buffalo. July 13; unsuccessful.
Preble, A. C., Altoona. July 18; successful. Saved some corn.
Russell, B. E., La Fontaine. June 2; successful. Saved corn 300 bushels, timothy 20 acres.
Russell, J. J., La Fontaine. June 1; unsuccessful.
Schwartz, A. L., Fredonia. July 5; no trial.
Stevens, O. W., Rest. July 14; successful. Saved some corn.
Whiteside, W. W., Albany. July 20; successful.

Woodson County.—Successful, 8; unsuccessful, 8; doubtful, 2; no trial, 1.

Boyd, J. D., Toronto. June 25; unsuccessful.
Bradford, H. E., Center Ridge. July 13; successful.
Bradley, W. L., Myra. July 9; unsuccessful.
Cope, S. J., Wortley. June 18; unsuccessful.
Davidson, A., Yates Center. July 23; doubtful.
Gilson, J. S., Toronto. August 22; successful.
Haradon, E. W., Yates Center. July 28; unsuccessful.
Hensley, W. F., Toronto. July 9; successful. Saved some corn.
Hess, J., Neosho Falls. July 15; successful. Saved some corn.
Howard, A., Vernon. July 14; unsuccessful.
Leege, B., Toronto. June 23; unsuccessful.
Manifold, B., Finney. July 27; no trial.
Morrow, J. W., Yates Center. July 28; successful. Saved some corn.
McCormick, J. W. G., Piqua. May 31; unsuccessful.
Pingrey, W. M., Yates Center. July 7; doubtful.
Ryan, R. M., Yates Center. July 15; successful. Saved corn about 15 acres.
Smith, J. J., Wortley. July 13; unsuccessful.
Williams, J. W., Neosho Falls. July 18; successful. Saved corn 4 acres.
Wingrove, W. D., Vernon. July 25; successful. Saved some sorghum.

State of Illinois.—Successful, 6; unsuccessful, 1; doubtful, 1; no trial, 4.

Baer, Daniel, Summerfield. June 30; doubtful.
Charless, W. A., Butler. July 20; unsuccessful.
Fader, Louis, Bible Grove. August 29; no trial.
Gruenewald, Henry, Shumway. July 28; successful. Saved corn 6 acres and field of wheat.
Kissick, C. W., New Douglass. July 9; successful.
Kost, Elias, Herrick. July 15; successful. Saved corn 450 bushels, cane 14 acres.
Klein, W. H., Johnsonville. August 2; no trial.
McIntosh, J. C., Rockford. August 18; successful.
Piepenbrink, J. O., Crete. August 5; no trial.
Seymour, J. H., Smithborough. July 27; successful. "Saved one-fourth of my corn crop."
Stephens, C. H., Owaneco. July 6; no trial.
Suffern, J. C., Suffern. July 26; successful. Saved corn 100 bushels.

Indian Territory.—Doubtful, 1; no trial, 1.

Dreves, F. R. Robberson. July 13; doubtful.

Morrison, C. W., Minco. June 24; no trial.

State of Iowa.—Successful, 1; no trial, 1.

Ronan, D. D., Waukon. July 11; no trial.

Macha, F. E., North McGregor. July 11; successful.

State of Minnesota.—Unsuccessful, 1.

Rickmeyer, A., Fair Haven. August 17; unsuccessful.

State of Mississippi.—Doubtful, 1; no trial, 1.

Atterbury, Aldridge, Mimms & Co., Estell. May 21; doubtful.

Weed, H. E., Agricultural College. May 23; no trial.

State of Missouri.—Successful, 6; no trial, 3.

Anderson, W., Cyrene. July 28; successful. "Saved about eight-tenths of the crop."

Arms, F. W., Nettleton. August 6; no trial.

Burkholder, F. A., Cyrene. July 30; no trial.

Deardorff, J. R., Bachelor. July 7; successful. Saved some corn.

Righter, H. J., Vandalia. July 15; successful.

Roy, J. W., Naomi. July 16; successful.

Smith, E. E., Hickman Mills. July 1; successful. Saved some corn.

Thomas, M. F., Medoc. July 29; no trial.

Wilkins, R. M., Sprague. August 1; successful.

State of Nebraska.—Successful, 10; unsuccessful, 4; doubtful, 1; no trial, 2.

Billings, J. C., Red Cloud. July 28; no trial.

Burns, J. W., Bostwick. July 11; successful.

Bussard, J., Campbell. July 18; no trial.

Cather, C. F., Red Cloud. July 18; successful.

Fish, Chas., Guide Rock. July 9; successful. Saved corn 18 acres.

George, M. E., Hubbell. July 22; successful. Saved corn 100 bushels.

Graham, S. L., Red Cloud. July 14; successful. Saved corn and wheat.

Harrison, J. A., Naponee. July 25; unsuccessful.

Hodkinson, W., Byron. July 13; successful.

Jeschke, W., Rockville. August 9; successful.

Millar, C., Shickley. August 9; unsuccessful.

McPortland, J., Red Cloud. July 14; successful.

Polmicky, Jos., Red Cloud. July 26; successful. Saved some corn.

Stearn, W. H., Cowles. July 28; doubtful.

Stevens, F. W., Ragan. August 4; successful.

Vance, R., Byron. July 18; unsuccessful.

Weigel, J., Guide Rock. July 21; unsuccessful.

Oklahoma Territory.—Successful, 18; unsuccessful, 4; doubtful, 1; no trial, 5.

Abercrombie, Mrs. Mabel, Omer. July 11; successful. Saved some corn.

Ambrister, S. A., Norman. May 24; unsuccessful.

Anderson, N. B., Norman. May 24; no trial.

Boston, Geo., Moore. August 30; unsuccessful.

Brown, Geo., Frisco. June 24; successful. Saved corn 75 bushels.

Campbell, W. H., Orlando. July 11; no trial.
Childers, G. W., Kingfisher. July 11; successful.
Cohee, Mrs. V. D., Langston. May 24; successful. Saved some corn and wheat.
Couch, D. S., Miller. July 6; successful. Saved corn 10 acres.
Davis, L. N., Moore. July 6; unsuccessful.
Gardiner, F. A., Guthrie. August 25; doubtful.
Hutchinson, W. H., Thurston. July 18; no trial.
Ingraham, F., Stillwater. June 27; successful. Saved corn 12½ acres.
Jackman, W. H., Moore. July 9; successful. Saved some corn and oats.
Johnson, T. J., Norman. May 20; successful. Saved crop of oats.
Longwith, J. G., Okarche. August 15; successful.
Magruder, A. C., Stillwater. July 6; successful. Saved corn 400 bushels.
McKee, H. L., Downs. July 5; successful. Saved corn 750 bushels.
Needham, J. N., Oklahoma City. July 4; successful.
O'Brien, M. F., Frisco. May 24; successful. Saved corn 5 bushels per acre.
Phelps, E. M., Moore. May 24; unsuccessful.
Shane, Geo., Moore. July 11; successful. Saved some corn and broom-corn.
Smalley, J., Guthrie. August 8; successful.
Smith, Yates, Yates. May 24; no trial.
Sproat, S. G., Oklahoma City. May 24; no trial.
Sutton, F. G., El Reno. August 15; successful. Saved crop of fodder sorghum.
Treaster, Anna, Perkins. July 1; successful.
Wooten, L. W., Moore. July 15; successful. Saved some corn.

State of Texas.—Successful, 9; unsuccessful, 5; doubtful, 2; no trial, 20.

Ainsworth, J. W., Kosse. May 24; no trial.
Bell, C. M., Tehuacana. May 24; no trial.
Bowden, R. A., Rice. May 24; no trial.
Burger, J. C., Rural Shade. May 24; successful.
Cain, Ed., Stubbs. May 24; successful.
Carter, J. C., Rice. May 24; no trial.
Farrer, H. F., Chatfield. May 24; successful.
French, H. C., Pilot Point. May 24; successful.
Grover, David & Freeman, Mexia. May 24; no trial.
Gregory, S. N., Rice. May 24; no trial.
Hardesty, S. R., Red Oak. May 24; doubtful.
Johnson, W. G., Reagan. June 20; no trial.
Johnston, G. E., Eureka. May 24; no trial.
Jones, C. S., Harvey. May 24; unsuccessful.
Kelley, C. D., Fitzgerald. May 30; unsuccessful.
LaRoe, A. A., Will's Point. May 24; unsuccessful.
May, W. F., Kingsbury. August 6; no trial.
Morgan, E. D., Peede. May 24; no trial.
Montfort, P. T., Chatfield. May 24; no trial.
Moreland, W. A., Moreland. May 24; no trial.
Muckleroy & Martin, Terrell. May 24; successful.
McKinnon, J. G., Prairie Grove. June 1; successful.
Nickells, R. W., Prairie Lea. August 18; unsuccessful.
Nickens, J. M., Housley. May 24; no trial.
Peters, W. S., Rural Shade. May 24; successful.
Pickering, Iva, Hester. May 24; no trial.
Rand, E. F., Crandall. May 24; no trial.

Sanger Bros., Dallas. May 24; no trial.
 Smith, W. C., Tulip. July 14; doubtful.
 Stell, J. W., Cooper. July 12; successful.
 Stephenson, W. C., Kosse. May 24; no trial.
 Waite, Wm., Iowa Park. August 18; unsuccessful.
 Walls, C. M., Lawndale. May 24; successful.
 Waring, Wm., Jolly. August 10; no trial.
 Watkins, W. B. W., Eureka. May 24; no trial.
 Wilkinson, J. L., Tolosa. May 24; no trial.

State of Wisconsin.—Successful, 3; unsuccessful, 1; no trial, 3.

Campbell, G. N., Stoughton. June 20; unsuccessful.
 Duffin, S. J., Eagle. August 12; no trial.
 Gardner, Edwin, Shopiere. August 13; successful. Saved corn 15 acres, barley 70 acres.
 Gates, H. E., Beloit. June 20; successful. Saved corn 25 bushels.
 Goff, E. S., Madison. June 20; no trial.
 Jones, G. G., Neenah. July 8; no trial.
 Norrie, G. A., Genesee. July 12; successful.

VIII.—SUMMARY OF ESTIMATES OF CROPS SAVED IN KANSAS.

Of the 1,044 field experimenters in Kansas who report successful results, 383 gave estimates of crops saved to them by reason of the experiments. The sum in cash value of these estimates is \$39,481.15, or an average of \$103.08 for each experimenter. If the average may be fairly applied to the remainder of the 1,044 successful experimenters, an aggregate saving of \$107,615.52 to the Kansas experimenters may be estimated. The reported estimates, arranged by crops, are as follows:

<i>Wheat</i> —2,283 bushels, at 50c.....	\$1,141 50	
115 acres (estimated saving of 5 bushels per acre) =		
575 bushels, at 50c.....	287 50	\$1,429 00
<i>Corn</i> —112,921 bushels, at 30c. a bushel.....	\$33,876 30	
2,570½ acres (estimated saving of 5 bushels per acre)		
=12,850 bushels, at 30c. a bushel.....	3,855 00	
Additional—cash estimate.....	180 00	37,911 30
<i>Oats</i> —3,570 bushels, at 25c. a bushel.....	\$892 50	
239 acres (estimated saving of 10 bushels an acre)=		
2,390 bushels, at 25c. a bushel.....	597 50	1,490 00
<i>Broom-Corn</i> —30 acres (estimated saving of \$6 an acre)...	\$180 00	
4½ tons, at \$80 a ton.....	360 00	540 00
<i>Millet</i> —349½ tons, at \$6 a ton.....	\$2,097 00	
169½ acres (estimated saving of 1 ton an acre)=169½		
tons, at \$6 a ton.....	1,017 00	
Millet seed, 170 bushels, at 40c. a bushel.....	68 00	
Additional—cash estimate.....	270 00	1,355 00

<i>Barley</i> —120 bushels, at 40c. a bushel.....		\$48 00
<i>Cane</i> —23½ acres (estimated saving of 2 tons an acre)=		
47 tons, at \$2 a ton.....	\$94 00	
59 tons, at \$2 a ton.....	118 00	
Additional—cash estimate.....	55 00	267 00
<i>Milo-Maize</i> —1 ton.....	
<i>Kaffir Corn</i> —250 bushels, at 40c. a bushel.....	\$100 00	
11 acres (estimated saving of 10 bushels an acre)=		
110 bushels, at 40c. a bushel.....	44 00	144 00
<i>Timothy</i> —37½ acres (estimated saving of one-half ton an acre)=18¾ tons, at \$7.50 a ton.....	\$140 60	140 60
<i>Sweet-Corn</i> —5 bushels, at 75c. a bushel.....	\$3 75	
One-half acre.....	7 50	11 25
Total saved in Kansas by 383 farmers.....		\$43,336 15
Average saving for each farmer (in Kansas), \$113.14.		

APPENDIX "A."

EXPENSES OF THE KANSAS UNIVERSITY EXPERIMENTAL STATION
FROM APRIL 7, 1892, TO DECEMBER 1, 1892.

Paid for supplies and material in laboratory:

E. R. Learned, two copper funnels.....	\$1 65
W. H. Duncan, hardware.....	4 85
Leis Drug Company, drugs, pill boxes, etc.....	21 25
Poehler Mercantile Company, crockery.....	1 00
B. W. Woodward, drugs, pill boxes, etc.....	11 00
Chemicals from chemical department.....	2 78

\$42 53

Paid for office supplies:

Journal Company, paper, printing, etc.....	\$45 97
Wyckoff, Seamans & Benedict, type-writer supplies.....	6 00
Field & Gibb, ink, pens, paper, books, etc.....	10 04
Telephone Company.....	2 25
Lawrence Book Company, ink, pens, paper, books, etc.....	5 16
Office Specialty Manufacturing Company, office files.....	4 50
W. J. Coleman, printing.....	11 03

84 95

Paid for extra office help:

G. J. Graves.....	\$201 91
Mary Snow.....	5 10
Mary Wellman.....	5 00

212 01

Paid for field agent's salary and for traveling expenses in field:

F. H. Snow.....	\$11 70
W. C. Stevens.....	9 50
E. C. Hickey.....	289 50

310 70

Paid for labor in laboratory:

H. R. Linville.....	\$52 66
E. S. Tucker.....	87 86
W. C. Stevens.....	200 00

340 52

Paid for drayage, freight, and express..... 53 85

APPENDIX "B."

DIRECTIONS FOR OBTAINING AND APPLYING THE CHINCH-BUG
INFECTION.

In order to keep up our supply of infected bugs, we must require that each person sending for infection send us live bugs from the field. These should be put into a tin box (a baking powder box is excellent for this purpose), *without soil*, and with a supply of green wheat or corn. The box should have a tight-fitting cover, and no holes need to be made. We have found that the bugs reach us in the best condition when sent in this way.

Upon receipt of infected bugs from the Station, a shallow box about 24x36 x6 inches, with tight joints, should be provided. Sprinkle the whole inside of the box with water and put in enough green wheat or corn to cover the bottom. Scatter the infected bugs over the bottom and put in a large quantity of live bugs from the field; a quart would not be too many for a box of the size above suggested. A smaller box may be used for a smaller quantity of bugs. After the bugs have remained in the box two days, remove half of them, alive and dead, and scatter them over that part of the field where the bugs are thickest; at the same time replenish the infection box with more bugs from the field. Continue to scatter bugs from the infection box over the field at intervals of two days, until it is seen that the bugs are dying rapidly all over the field. Keep the box moist by repeated sprinkling and change the green food as often as it loses its freshness.

Careful attention to these directions will often insure success where careless use of the infection would fail. Make daily notes on the appearance of the bugs in the infection box and in the field, and of the weather while the field infection is in progress. Note carefully the chinch-bug conditions in neighboring fields. Keep a list of farmers who get infected bugs from your farm.

Save a quantity of fungus-covered and non-fungus-covered dead bugs in a tin box for use the following year. Put the infection box away for future use.

Should the first lot of infected bugs from the Station seem to fail in their purpose, send without delay for a new supply.

Do not fail to send a full report of the experiment to the Director of the Station.
